HR Analytics Dashboard

Employee Attrition & Workforce Insights

Submitted by: Shree Gulumbe

Tools Used: Power BI

Dataset: HR Employee Attrition Data

Dashboard:

Insights from the Analysis:

1) Workforce Overview

- The dashboard contains **1,470 employees**, of whom **237 employees** have left the organization.
- The overall attrition rate is **16.1%**, indicating a meaningful employee-retention challenge.
- The average employee age is **37 years**, average salary is **6.5K**, and average years at the company is **7.0 years**.

Insights from the Analysis

2) Attrition by Gender

- Male employees account for **150** of the attrition cases, while female employees account for **87**.
- The dashboard therefore shows a higher number of attrition cases among male employees than female employees.

3) Attrition by Age

- The **26–35** age group has the highest attrition with **116** cases.
- It is followed by the **18–25** group with 44 cases and the **36–45** group with 43 cases.
- The **46–55** group records 26 cases, while employees aged **55+** record only 8 cases.
- This shows that attrition is concentrated mainly among employees below 45 years of age.

4) Attrition by Education

- **Life Sciences** represents the largest education category at **38%** of attrition cases.
- **Medical** follows at 27%, while Marketing accounts for 15% and Technical Degree for 14%.
- The remaining **Other** category contributes about 5%.

5) Attrition by Salary Slab

- Employees earning **up to 5K** form the largest group of attrition cases, with **163** cases.
- The 5K–10K slab records 49 cases, followed by 10K–15K with 20 cases and 15K+ with only 5 cases.
- The dashboard indicates that attrition is heavily concentrated in the lower salary range.

Insights & Key Takeaways

6) Attrition by Years at Company

- The years-at-company visual shows the highest attrition at approximately **1 year of tenure**, with **59 cases**.
- Attrition is noticeably higher during the early-tenure period and generally becomes lower as tenure increases.
- This suggests that early employee experience, onboarding, role expectations, compensation, and career development may be important areas for retention efforts.

7) Attrition by Job Role

- **Laboratory Technician** has the highest number of attrition cases at **62**.
- **Sales Executive** follows with 57 cases, **Research Scientist** with 47, and **Sales Representative** with 33.
- These four roles together account for most of the attrition shown in the job-role visual.

Overall Project Summary

The HR Analytics Dashboard converts employee and attrition data into an interactive Power BI report. The analysis highlights the scale of attrition, the employee groups most affected, salary and education patterns, and the relationship between attrition and tenure or job role. These insights can help HR teams focus retention efforts on high-risk employee segments and improve workforce planning.

Key Findings at a Glance

- **1,470** total employees analyzed.
- **237** attrition cases with an overall attrition rate of **16.1%**.
- Highest age-group attrition: **26–35 (116 cases)**.
- Highest salary-slab attrition: **up to 5K (163 cases)**.
- Highest education category: **Life Sciences (38%)**.
- Highest job-role attrition: **Laboratory Technician (62 cases)**.
- Highest visible tenure point: **1 year (59 cases)**.
